

National Textile University, Faisalabad

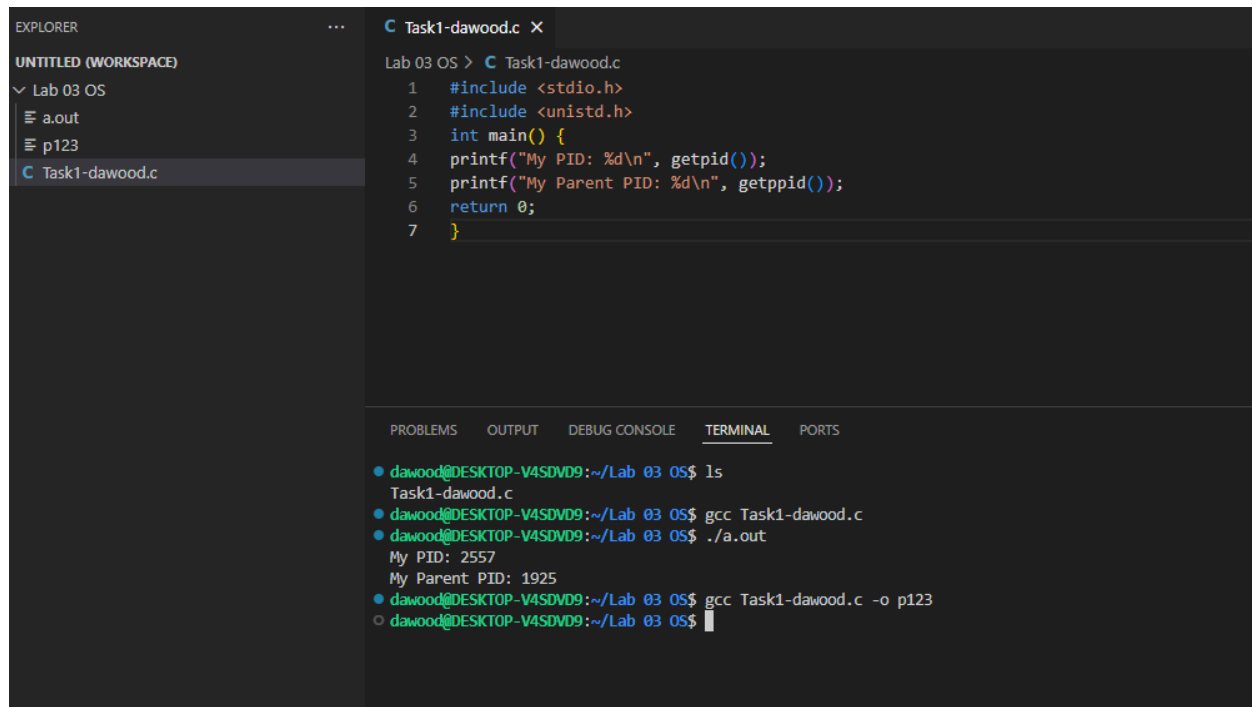

Department of Computer Science

Name	Dawood Saif
Class	SE-5 th (A)
Reg. No.	23-NTU-CS-1145
Course	Operating system
Submitted To	Sir Nasir
Submission Date	3/10/2025
Lab No.	3 class work

Lab No. 3 Operating system:

Task1: ON Vs code using .c language

in this file we just run and compiled the code using command line. In this we created three files

The screenshot shows the Visual Studio Code interface. On the left, the Explorer panel shows a workspace with a folder named 'Lab 03 OS' containing files 'a.out', 'p123', and 'Task1-dawood.c'. The main editor displays the code for 'Task1-dawood.c':

```
Lab 03 OS > C Task1-dawood.c
1  #include <stdio.h>
2  #include <unistd.h>
3  int main() {
4      printf("My PID: %d\n", getpid());
5      printf("My Parent PID: %d\n", getppid());
6      return 0;
7  }
```

At the bottom, the TERMINAL panel shows the following commands and output:

```
dawood@DESKTOP-V4SDVD9:~/Lab 03 OS$ ls
Task1-dawood.c
dawood@DESKTOP-V4SDVD9:~/Lab 03 OS$ gcc Task1-dawood.c
dawood@DESKTOP-V4SDVD9:~/Lab 03 OS$ ./a.out
My PID: 2557
My Parent PID: 1925
dawood@DESKTOP-V4SDVD9:~/Lab 03 OS$ gcc Task1-dawood.c -o p123
dawood@DESKTOP-V4SDVD9:~/Lab 03 OS$
```

Task 2:

(similarly as task1 it will create child and run parent before child running:

The screenshot shows the VS Code interface with the Explorer pane on the left displaying the workspace structure. The main editor shows the file `Task2-dawood.c` with the following code:

```
1 #include <unistd.h>
2 int main() {
3     pid_t pid = fork();
4     if (pid == 0) {
5         // This block runs in the child process
6         printf("Child: PID=%d, Parent=%d\n", getpid(), getppid());
7     } else {
8         // This block runs in the parent process
9         printf("Parent: PID=%d, Child=%d\n", getpid(), pid);
10    }
```

The terminal pane at the bottom shows the following output:

```
Lab 03 OS > C Task2-dawood.c
Task2-dawood.c: In function 'main':
Task2-dawood.c:11:1: error: 'Program' undeclared (first use in this function)
11 | Program 3: Exec1 - Replacing a Process
   | ^~~~~~
Task2-dawood.c:11:1: note: each undeclared identifier is reported only once for each function it appears in
Task2-dawood.c:11:8: error: expected ';' before numeric constant
11 | Program 3: Exec1 - Replacing a Process
   | ^~~~~~
Task2-dawood.c:11:18: error: stray '\342' in program
11 | Program 3: Exec1 <U+2013> Replacing a Process
   | ^~~~~~
Task2-dawood.c:12:17: error: stray '\342' in program
12 | Program 4: Wait <U+2013> Synchronization
   | ^~~~~~
Lab 03 OS$ gcc Task2-dawood.c
Lab 03 OS$ gcc Task2-dawood.c -o simpleprocess
Lab 03 OS$ ./simpleprocess
Parent: PID=5515, Child=5516
Child: PID=5516, Parent=5515
Lab 03 OS$
```

Task 3: (on Vs code)

The screenshot shows the VS Code interface with the Explorer pane on the left displaying the workspace structure. The main editor shows the file `Task3-dawood.c` with the following code:

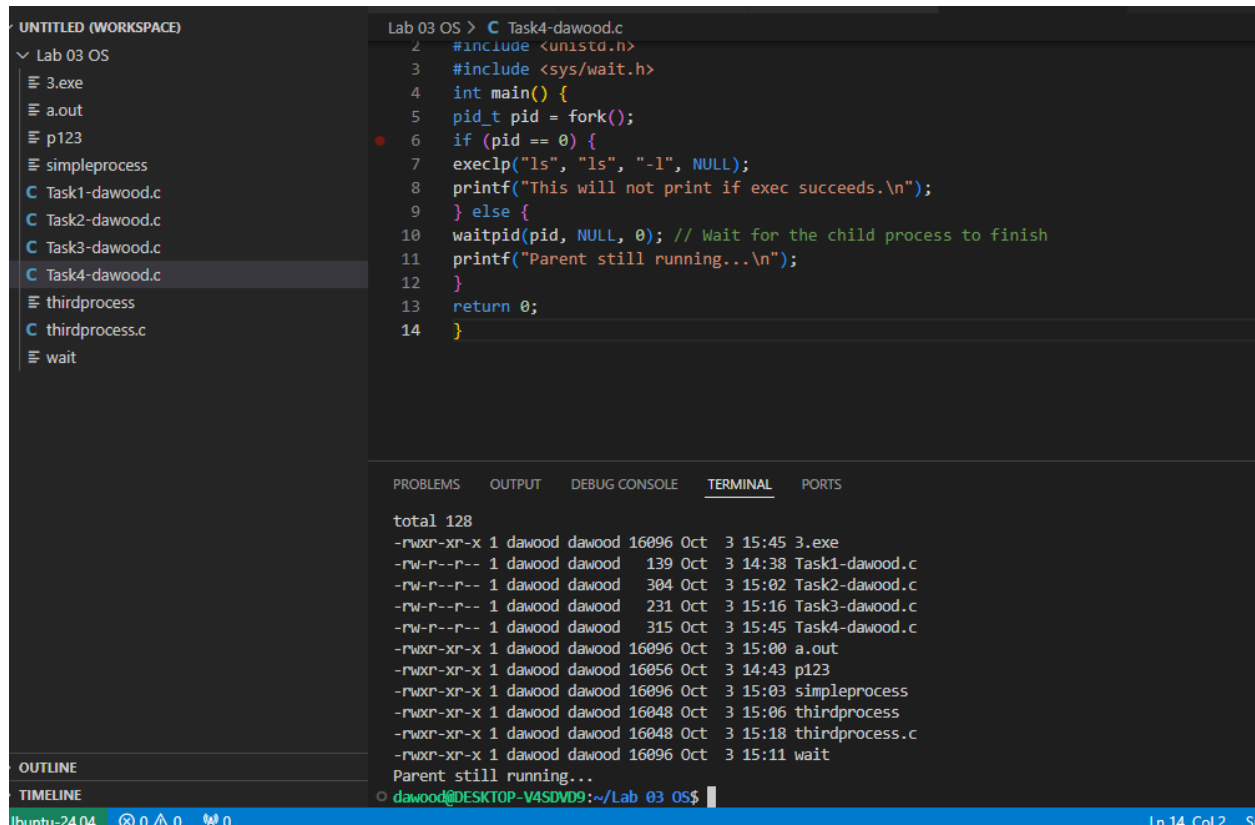

```
1 #include <stdio.h>
2 #include <unistd.h>
3 int main() {
4     pid_t pid = fork();
5     if (pid == 0) {
6         execlp("ls", "ls", "-l", NULL);
7         printf("This will not print if exec succeeds.\n");
8     } else {
9         printf("Parent still running...\n");
10    }
11    return 0;
12 }
```

The terminal pane at the bottom shows the following output:

```
Lab 03 OS > C Task3-dawood.c
Lab 03 OS$ gcc Task3-dawood.c -o thirdprocess.c
Lab 03 OS$ ./exe
bash: ./exe: No such file or directory
Lab 03 OS$
```

Task4:

In this task we created exe.c and it show us wait.c things

```
Lab 03 OS > C Task4-dawood.c
2  #include <unistd.h>
3  #include <sys/wait.h>
4  int main() {
5      pid_t pid = fork();
6      if (pid == 0) {
7          execlp("ls", "ls", "-l", NULL);
8          printf("This will not print if exec succeeds.\n");
9      } else {
10         waitpid(pid, NULL, 0); // Wait for the child process to finish
11         printf("Parent still running...\n");
12     }
13     return 0;
14 }
```

total 128

Parent still running...

dawood@DESKTOP-V4SDVD9:~/Lab 03 OS\$

Second Work by Sir Ahmad:

- In this we practiced some of the important commands on ubuntu Like Job, kill, ps command with some flags (-ef)

- | pipe operator and its uses, yes command
- Bash command, top command
- Sleep 30 / sleep 30& (in background) etc

```

awood@DESKTOP-V4SDVD9:~$ ps
